

— T-SHIRT PROFILE

This exercise will help you to get to know each other better. An interdisciplinary team is one of the core success factors in Design Thinking. You can use this to demonstrate your skills and share them with the group.

Rules:

- Each participant creates their own t-shirt profile
- The *vertical* area represents skills and knowledge within a certain domain (e.g. expert knowledge in electrical engineering)
 - ***expert knowledge***
- The *horizontal* area represents those activities and competences that are not related to one's career, e.g. openness, interest or curiosity
 - ***broad knowledge***

What you will need:

- The T-Shirt Profile template
- One pen for each participant

You can also use this before the start of a project to find suitable team members.
